

Dear PMM Hiring Team,

The emphasis on a "mindset rooted in kindness, empathy, and collaboration" in your job description is what immediately drew me to this opportunity. This people-first approach aligns perfectly with my own professional values, where I believe that the strongest teams are built on mutual respect and a shared commitment to both our work and one another.

With **over 11+ years of experience** as a data engineer, I have a proven track record of designing and building scalable data pipelines on cloud platforms such as **Snowflake, Databricks, and BigQuery**. My expertise in **Python** allows me to create robust ETL processes, while my solid understanding of SQL and NoSQL databases ensures data integrity and efficiency. I am well-versed in data warehousing, modeling, and best practices across **AWS and Azure**.

In my previous roles, I have consistently collaborated with cross-functional teams to deliver impactful solutions, and I have hands-on experience with event-driven architectures. My background in consulting has further sharpened my ability to communicate complex technical concepts effectively. I am a firm believer that technical skills are elevated when paired with a genuine willingness to share knowledge and a collaborative spirit.

I am excited by the prospect of contributing my technical expertise to a team that values empathy and respect as much as I do.

Sincerely,

**Sourabh Muchal**
